Factorial domains

Definition

An integral domain R is *factorial* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, and
2. this factorization is unique (up to reordering and unit multiple).

Factorial domains

Definition

An integral domain R is *factorial* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, and
2. this factorization is unique (up to reordering and unit multiple).

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple)~~.

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple)~~.

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Example

If $R = \mathbb{Z}[\sqrt{-5}]$, then $6 \in R$ has two distinct factorizations:

$$6 = 2 \cdot 3 = (1 + \sqrt{-5})(1 - \sqrt{-5})$$

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple)~~.

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Example

If $R = \mathbb{Z}[\sqrt{-5}]$, then $6 \in R$ has two distinct factorizations:

$$6 = 2 \cdot 3 = (1 + \sqrt{-5})(1 - \sqrt{-5})$$

To prove: define a *valuation* $a + b\sqrt{-5} \mapsto a^2 + 5b^2$.

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple)~~.

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Example

If $R = \mathbb{Z}[\sqrt{-5}]$, then $6 \in R$ has two distinct factorizations:

$$6 = 2 \cdot 3 = (1 + \sqrt{-5})(1 - \sqrt{-5})$$

To prove: define a *valuation* $a + b\sqrt{-5} \mapsto a^2 + 5b^2$.
The point: it's nontrivial.

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple)~~.

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Example

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple)~~.

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Example

Let $R = \mathbb{C}[x^2, x^3]$.

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple)~~.

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Example

Let $R = \mathbb{C}[x^2, x^3]$.

1. x^2 and x^3 are irreducible.

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple~~).

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Example

Let $R = \mathbb{C}[x^2, x^3]$.

1. x^2 and x^3 are irreducible.
2. $x^6 = x^3 \cdot x^3 = x^2 \cdot x^2 \cdot x^2$.

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple)~~.

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Observation

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple)~~.

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Observation

- Where's the addition?

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple~~).

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Observation

- Where's the addition?
- Factorization in (cancellative comutative) monoids:

Factorial domains

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple)~~.

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Observation

- Where's the addition?
- Factorization in (cancellative comutative) monoids:

$$(R, +, \cdot) \quad \rightsquigarrow \quad (R \setminus \{0\}, \cdot)$$

Factorial domains

Definition

An integral domain R is *atomic* if for each non-unit $r \in R$,

1. there is a *factorization* $r = u_1 \cdots u_k$ as a product of irreducibles, ~~and~~
2. ~~this factorization is unique (up to reordering and unit multiple~~).

Example

$\mathbb{Z}$ is factorial: each $z = p_1 \cdots p_k$ for primes $p_1 \cdots p_k$.

Observation

- Where's the addition?
- Factorization in (cancellative comutative) monoids:

$$\begin{array}{rcl} (R, +, \cdot) & \rightsquigarrow & (R \setminus \{0\}, \cdot) \\ (\mathbb{C}[M], +, \cdot) & \rightsquigarrow & (M, \cdot) \end{array}$$

Interesting monoids

Definition

An *arithmetical congruence monoid* is a **multiplicative** submonoid

$$M_{a,b} = \{n : n \equiv a \bmod b\} \subset \mathbb{Z}_{>0}$$

for $a, b > 0$ with $a^2 \equiv a \bmod b$.

Interesting monoids

Definition

An *arithmetical congruence monoid* is a **multiplicative** submonoid

$$M_{a,b} = \{n : n \equiv a \bmod b\} \subset \mathbb{Z}_{>0}$$

for $a, b > 0$ with $a^2 \equiv a \bmod b$.

Example

The *Hilbert monoid* $M_{1,4} = \{1, 5, 9, 13, 17, \ldots\}$.

Interesting monoids

Definition

An *arithmetical congruence monoid* is a **multiplicative** submonoid

$$M_{a,b} = \{n : n \equiv a \bmod b\} \subset \mathbb{Z}_{>0}$$

for $a, b > 0$ with $a^2 \equiv a \bmod b$.

Example

The *Hilbert monoid* $M_{1,4} = \{1, 5, 9, 13, 17, \ldots\}$.

- Every product in $M_{1,4}$ is a product in $\mathbb{Z}$.

Interesting monoids

Definition

An *arithmetical congruence monoid* is a **multiplicative** submonoid

$$M_{a,b} = \{n : n \equiv a \bmod b\} \subset \mathbb{Z}_{>0}$$

for $a, b > 0$ with $a^2 \equiv a \bmod b$.

Example

The *Hilbert monoid* $M_{1,4} = \{1, 5, 9, 13, 17, \ldots\}$.

- Every product in $M_{1,4}$ is a product in $\mathbb{Z}$.
- $9, 21, 49 \in M_{1,4}$ are irreducible.

Interesting monoids

Definition

An *arithmetical congruence monoid* is a **multiplicative** submonoid

$$M_{a,b} = \{n : n \equiv a \bmod b\} \subset \mathbb{Z}_{>0}$$

for $a, b > 0$ with $a^2 \equiv a \bmod b$.

Example

The *Hilbert monoid* $M_{1,4} = \{1, 5, 9, 13, 17, \ldots\}$.

- Every product in $M_{1,4}$ is a product in $\mathbb{Z}$.
- $9, 21, 49 \in M_{1,4}$ are irreducible.
- $441 = 9 \cdot 49 = 21 \cdot 21$

Interesting monoids

$McN = \langle 6, 9, 20 \rangle = \{0, 6, 9, 12, 15, 18, 20, 21, \ldots\}$. "McNugget Monoid"

Factorization invariants

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$\mathsf{Z}(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m.

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$\mathsf{Z}(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m. The *elasticity* of m is

$$\rho(m) = \frac{\text{max length in } \mathsf{Z}(m)}{\text{min length in } \mathsf{Z}(m)}.$$

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$\mathsf{Z}(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m. The *elasticity* of m is

$$\rho(m) = \frac{\text{max length in } \mathsf{Z}(m)}{\text{min length in } \mathsf{Z}(m)}.$$

The *elasticity* of M is $\rho(M) = \sup_{m \in M} \rho(m)$.

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$\mathsf{Z}(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m. The *elasticity* of m is

$$\rho(m) = \frac{\text{max length in } \mathsf{Z}(m)}{\text{min length in } \mathsf{Z}(m)}.$$

The *elasticity* of M is $\rho(M) = \sup_{m \in M} \rho(m)$.

Example (The good)

The Hilbert monoid: $\rho(M_{1,4}) = 1$.

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$\mathsf{Z}(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m. The *elasticity* of m is

$$\rho(m) = \frac{\text{max length in } \mathsf{Z}(m)}{\text{min length in } \mathsf{Z}(m)}.$$

The *elasticity* of M is $\rho(M) = \sup_{m \in M} \rho(m)$.

Example (The good)

The Hilbert monoid: $\rho(M_{1,4}) = 1$.

- Every factorization of $m \in M_{1,4}$ has the same length.

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$\mathsf{Z}(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m. The *elasticity* of m is

$$\rho(m) = \frac{\text{max length in } \mathsf{Z}(m)}{\text{min length in } \mathsf{Z}(m)}.$$

The *elasticity* of M is $\rho(M) = \sup_{m \in M} \rho(m)$.

Example (The good)

The Hilbert monoid: $\rho(M_{1,4}) = 1$.

- Every factorization of $m \in M_{1,4}$ has the same length.
- This is (almost) the best we could hope for.

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$\mathsf{Z}(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m. The *elasticity* of m is

$$\rho(m) = \frac{\text{max length in } \mathsf{Z}(m)}{\text{min length in } \mathsf{Z}(m)}.$$

The *elasticity* of M is $\rho(M) = \sup_{m \in M} \rho(m)$.

Example (The bad)

Numerical monoids: $S = \langle 6, 9, 20 \rangle \subset \mathbb{N}$. $\rho(S) = 20/6$.

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$\mathsf{Z}(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m. The *elasticity* of m is

$$\rho(m) = \frac{\text{max length in } \mathsf{Z}(m)}{\text{min length in } \mathsf{Z}(m)}.$$

The *elasticity* of M is $\rho(M) = \sup_{m \in M} \rho(m)$.

Example (The bad)

Numerical monoids: $S = \langle 6, 9, 20 \rangle \subset \mathbb{N}$. $\rho(S) = 20/6$.

- $6 \cdot 20 = 6 + \cdots + 6 = 20 + \cdots + 20$, so $\rho(6 \cdot 20) = 20/6$.

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$Z(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m. The *elasticity* of m is

$$\rho(m) = \frac{\text{max length in } Z(m)}{\text{min length in } Z(m)}.$$

The *elasticity* of M is $\rho(M) = \sup_{m \in M} \rho(m)$.

Example (The bad)

Numerical monoids: $S = \langle 6, 9, 20 \rangle \subset \mathbb{N}$. $\rho(S) = 20/6$.

- $6 \cdot 20 = 6 + \cdots + 6 = 20 + \cdots + 20$, so $\rho(6 \cdot 20) = 20/6$.
- $\rho(n) \leq 20/6$ for all $n \in S$.

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$\mathsf{Z}(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m. The *elasticity* of m is

$$\rho(m) = \frac{\text{max length in } \mathsf{Z}(m)}{\text{min length in } \mathsf{Z}(m)}.$$

The *elasticity* of M is $\rho(M) = \sup_{m \in M} \rho(m)$.

Example (The ugly)

The Meyerson monoid: $\rho(M_{4,6}) = 2$.

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$\mathsf{Z}(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m. The *elasticity* of m is

$$\rho(m) = \frac{\text{max length in } \mathsf{Z}(m)}{\text{min length in } \mathsf{Z}(m)}.$$

The *elasticity* of M is $\rho(M) = \sup_{m \in M} \rho(m)$.

Example (The ugly)

The Meyerson monoid: $\rho(M_{4,6}) = 2$.

- $\rho(m) < 2$ for all $m \in M_{4,6}$!

Factorization invariants

Definition

Fix a commutative, cancellative monoid $(M, \cdot)$. For each non-unit $m \in M$,

$$\mathsf{Z}(m) = \{\text{factorizations } m = \textstyle\prod_i u_i\}$$

denotes the *set of factorizations* of m. The *elasticity* of m is

$$\rho(m) = \frac{\text{max length in } \mathsf{Z}(m)}{\text{min length in } \mathsf{Z}(m)}.$$

The *elasticity* of M is $\rho(M) = \sup_{m \in M} \rho(m)$.

Example (The ugly)

The Meyerson monoid: $\rho(M_{4,6}) = 2$.

- $\rho(m) < 2$ for all $m \in M_{4,6}$!
- Elasticity of $M_{4,6}$ is *not accepted*.

Definition

The *set of factorizations* of S is the set

$$\mathcal{Z}(S) = \{\mathsf{Z}(n) : n \in S\}$$

Example

$$\mathcal{Z}(\langle 6, 9, 20 \rangle) = \left\{ \begin{array}{l} \{(1,0,0)\}, \{(0,1,0)\}, \{(0,0,1)\}, \\ \{(2,0,0)\}, \{(3,0,0), (0,2,0)\}, \\ \{(0,0,3), (10,0,0), (7,2,0), \ldots\}, \\ \end{array} \right.$$

The set of factorizations: a complete invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{Z}(n) = \left\{ \mathbf{a} \in \mathbb{N}^k : n = a_1 n_1 + \cdots + a_k n_k \right\}$$

Definition

The *set of factorizations* of S is the set

$$\mathcal{Z}(S) = \{\mathsf{Z}(n) : n \in S\}$$

Example

$$\mathcal{Z}(\langle 6, 9, 20 \rangle) = \left\{ \begin{array}{l} \{(1,0,0)\}, \{(0,1,0)\}, \{(0,0,1)\}, \\ \{(2,0,0)\}, \{(3,0,0), (0,2,0)\}, \\ \{(0,0,3), (10,0,0), (7,2,0), \ldots\}, \\ \ \ldots \end{array} \right\}$$

The set of factorizations: a complete invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{Z}(n) \;=\; \left\{ \mathbf{a} \in \mathbb{N}^k : n = a_1 n_1 + \cdots + a_k n_k \right\}$$

Definition

The *set of factorizations* of S is the set

$$\mathcal{Z}(S) = \{\mathsf{Z}(n) : n \in S\}$$

Observations

The set of factorizations: a complete invariant

Fix a numerical monoid $S = \langle n_1, \dots, n_k \rangle$. For $n \in S$,

$$\mathsf{Z}(n) = \left\{ \mathbf{a} \in \mathbb{N}^k : n = a_1 n_1 + \cdots + a_k n_k \right\}$$

Definition

The *set of factorizations* of S is the set

$$\mathcal{Z}(S) = \{\mathsf{Z}(n) : n \in S\}$$

Observations

- $\mathcal{Z}(S)$ encapsulates all relations between $n_1, \dots, n_k$.

The set of factorizations: a complete invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{Z}(n) = \{\mathbf{a} \in \mathbb{N}^k : n = a_1 n_1 + \cdots + a_k n_k\}$$

Definition

The *set of factorizations* of S is the set

$$\mathcal{Z}(S) = \{\mathsf{Z}(n) : n \in S\}$$

Observations

- $\mathcal{Z}(S)$ encapsulates all relations between $n_1, \ldots, n_k$.
- $\mathcal{Z}(S)$ determines S up to isomorphism.

The set of factorizations: a complete invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{Z}(n) = \left\{\mathbf{a} \in \mathbb{N}^k : n = a_1 n_1 + \cdots + a_k n_k\right\}$$

Definition

The *set of factorizations* of S is the set

$$\mathcal{Z}(S) = \{\mathsf{Z}(n) : n \in S\}$$

Observations

- $\mathcal{Z}(S)$ encapsulates all relations between $n_1, \ldots, n_k$.
- $\mathcal{Z}(S)$ determines S up to isomorphism.
- $\mathcal{Z}(S)$ is **enormous**.

The set of factorizations: a complete invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{Z}(n) = \left\{ \mathbf{a} \in \mathbb{N}^k : n = a_1 n_1 + \cdots + a_k n_k \right\}$$

Definition

The *set of factorizations* of S is the set

$$\mathcal{Z}(S) = \{\mathsf{Z}(n) : n \in S\}$$

Observations

- $\mathcal{Z}(S)$ encapsulates all relations between $n_1, \ldots, n_k$.
- $\mathcal{Z}(S)$ determines S up to isomorphism.
- $\mathcal{Z}(S)$ is **enormous**.

Example

In $McN = \langle 6, 9, 20 \rangle$, $\mathsf{Z}(60)$ uniquely determines $\mathcal{Z}(McN)$.

A step in the right direction: length sets

A step in the right direction: length sets

Definition

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) = \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

denotes the *length set* of n.

A step in the right direction: length sets

Definition

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) = \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

denotes the *length set* of n.

Example

$McN = \langle 6, 9, 20 \rangle$:

A step in the right direction: length sets

Definition

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) = \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

denotes the *length set* of n.

Example

$McN = \langle 6, 9, 20 \rangle$:

$$\mathsf{Z}(60) = \{(0,0,3), (1,6,0), (4,4,0), (7,2,0), (10,0,0)\}$$

A step in the right direction: length sets

Definition

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) \quad = \quad \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

denotes the *length set* of n.

Example

$McN = \langle 6, 9, 20 \rangle$:

$$\begin{aligned} \mathsf{Z}(60) &= \{(0,0,3), (1,6,0), (4,4,0), (7,2,0), (10,0,0)\} \\ \mathsf{L}(60) &= \{3, 7, 8, 9, 10\} \end{aligned}$$

A step in the right direction: length sets

Definition

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) = \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

denotes the *length set* of n.

Example

$McN = \langle 6, 9, 20 \rangle$:

$$\begin{aligned} \mathsf{Z}(60) &= \{(0,0,3),(1,6,0),(4,4,0),(7,2,0),(10,0,0)\} \\ \mathsf{L}(60) &= \{3,7,8,9,10\} \end{aligned}$$

$S = \langle 7, 10, 13, 16 \rangle$:

A step in the right direction: length sets

Definition

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) \;=\; \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

denotes the *length set* of n.

Example

$McN = \langle 6, 9, 20 \rangle$:

$$\begin{aligned} \mathsf{Z}(60) &= \{(0,0,3), (1,6,0), (4,4,0), (7,2,0), (10,0,0)\} \\ \mathsf{L}(60) &= \{3, 7, 8, 9, 10\} \end{aligned}$$

$S = \langle 7, 10, 13, 16 \rangle$:

$$\mathsf{Z}(60) \;=\; \{(0,6,0,0), (1,4,1,0), (2,2,2,0), (3,0,3,0), \ldots\}$$

A step in the right direction: length sets

Definition

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) = \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

denotes the *length set* of n.

Example

$McN = \langle 6, 9, 20 \rangle$:

$$\begin{aligned} \mathsf{Z}(60) &= \{(0,0,3),(1,6,0),(4,4,0),(7,2,0),(10,0,0)\} \\ \mathsf{L}(60) &= \{3,7,8,9,10\} \end{aligned}$$

$S = \langle 7, 10, 13, 16 \rangle$:

$$\begin{aligned} \mathsf{Z}(60) &= \{(0,6,0,0),(1,4,1,0),(2,2,2,0),(3,0,3,0),\ldots\} \\ \mathsf{L}(60) &= \{6\} \end{aligned}$$

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) \;=\; \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) = \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

Definition

For $n \in S$, let

$$\begin{aligned} \mathsf{M}(n) &= \max \mathsf{L}(n) \qquad \text{and} \\ \mathsf{m}(n) &= \min \mathsf{L}(n) \end{aligned}$$

denote the *maximum* and *minimum* factorization lengths of n.

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) = \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

Definition

For $n \in S$, let

$$\begin{aligned} \mathsf{M}(n) &= \max\ \mathsf{L}(n) \qquad \text{and} \\ \mathsf{m}(n) &= \min\ \mathsf{L}(n) \end{aligned}$$

denote the *maximum* and *minimum* factorization lengths of n.

Example

$S = \langle 6, 9, 20 \rangle$:

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) = \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

Definition

For $n \in S$, let

$$\begin{aligned} \mathsf{M}(n) &= \max\ \mathsf{L}(n) \qquad \text{and} \\ \mathsf{m}(n) &= \min\ \mathsf{L}(n) \end{aligned}$$

denote the *maximum* and *minimum* factorization lengths of n.

Example

$S = \langle 6, 9, 20 \rangle$:

$$\mathsf{Z}(60) = \{(0,0,3), (1,6,0), (4,4,0), (7,2,0), (10,0,0)\}$$

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{L}(n) = \{a_1 + \cdots + a_k : (a_1, \ldots, a_k) \in \mathsf{Z}(n)\}$$

Definition

For $n \in S$, let

$$\begin{aligned} \mathsf{M}(n) &= \max \mathsf{L}(n) \qquad \text{and} \\ \mathsf{m}(n) &= \min \mathsf{L}(n) \end{aligned}$$

denote the *maximum* and *minimum* factorization lengths of n.

Example

$S = \langle 6, 9, 20 \rangle$:

$$\begin{aligned} \mathsf{Z}(60) &= \{(0,0,3),(1,6,0),(4,4,0),(7,2,0),(10,0,0)\} \\ \mathsf{M}(60) &= 10 \\ \mathsf{m}(60) &= 3 \end{aligned}$$

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max\ \mathsf{L}(n) \qquad\qquad \mathsf{m}(n) = \min\ \mathsf{L}(n)$$

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max\ \mathsf{L}(n) \qquad\qquad \mathsf{m}(n) = \min\ \mathsf{L}(n)$$

Observations

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max \ \mathsf{L}(n) \qquad \qquad \mathsf{m}(n) = \min \ \mathsf{L}(n)$$

Observations

- Max length factorization: lots of small irreducibles

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max \ \mathsf{L}(n) \qquad\qquad \mathsf{m}(n) = \min \ \mathsf{L}(n)$$

Observations

- Max length factorization: lots of small irreducibles
- Min length factorization: lots of large irreducibles

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max\ \mathsf{L}(n) \qquad\qquad \mathsf{m}(n) = \min\ \mathsf{L}(n)$$

Observations

- Max length factorization: lots of small irreducibles
- Min length factorization: lots of large irreducibles

Example

$S = \langle 6, 9, 20 \rangle$:

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max \mathsf{L}(n) \qquad\qquad \mathsf{m}(n) = \min \mathsf{L}(n)$$

Observations

- Max length factorization: lots of small irreducibles
- Min length factorization: lots of large irreducibles

Example

$S = \langle 6, 9, 20 \rangle$:

$$\mathsf{M}(40) \;=\; 2 \quad \text{and} \quad \mathsf{Z}(40) \;=\; \{(0, 0, 2)\}$$

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max \ \mathsf{L}(n) \qquad\qquad \mathsf{m}(n) = \min \ \mathsf{L}(n)$$

Observations

- Max length factorization: lots of small irreducibles
- Min length factorization: lots of large irreducibles

Example

$S = \langle 6, 9, 20 \rangle$:

$$\mathsf{M}(40) = 2 \quad \text{and} \quad \mathsf{Z}(40) = \{(0, 0, 2)\}$$

$S = \langle 5, 16, 17, 18, 19 \rangle$:

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max \mathsf{L}(n) \qquad \mathsf{m}(n) = \min \mathsf{L}(n)$$

Observations

- Max length factorization: lots of small irreducibles
- Min length factorization: lots of large irreducibles

Example

$S = \langle 6, 9, 20 \rangle$:

$$\mathsf{M}(40) = 2 \quad \text{and} \quad \mathsf{Z}(40) = \{(0, 0, 2)\}$$

$S = \langle 5, 16, 17, 18, 19 \rangle$:

$$\mathsf{m}(82) = 5 \quad \text{and} \quad \mathsf{Z}(82) = \{(0, 3, 2, 0, 0), \ldots\}$$

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max \ \mathsf{L}(n) \qquad\qquad \mathsf{m}(n) = \min \ \mathsf{L}(n)$$

Observations

- Max length factorization: lots of small irreducibles
- Min length factorization: lots of large irreducibles

Example

$S = \langle 6, 9, 20 \rangle$:

$$\mathsf{M}(40) = 2 \quad \text{and} \quad \mathsf{Z}(40) = \{(0,0,2)\}$$

$S = \langle 5, 16, 17, 18, 19 \rangle$:

$$\begin{array}{rclcrcl} \mathsf{m}(82) & = & 5 & \text{and} & \mathsf{Z}(82) & = & \{(0,3,2,0,0), \ldots\} \\ \mathsf{m}(462) & = & 25 & \text{and} & \mathsf{Z}(462) & = & \{(0,3,2,0,20), \ldots\} \end{array}$$

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max \ \mathsf{L}(n) \qquad\qquad \mathsf{m}(n) = \min \ \mathsf{L}(n)$$

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max \mathsf{L}(n) \qquad\qquad \mathsf{m}(n) = \min \mathsf{L}(n)$$

Theorem (Barron–O–Pelayo, 2014)

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n > n_k(n_{k-1} - 1)$,

$$\begin{aligned} \mathsf{M}(n + n_1) &= 1 + \mathsf{M}(n) \\ \mathsf{m}(n + n_k) &= 1 + \mathsf{m}(n) \end{aligned}$$

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max \mathsf{L}(n) \qquad \mathsf{m}(n) = \min \mathsf{L}(n)$$

Theorem (Barron–O–Pelayo, 2014)

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n > n_k(n_{k-1} - 1)$,

$$\begin{aligned} \mathsf{M}(n + n_1) &= 1 + \mathsf{M}(n) \\ \mathsf{m}(n + n_k) &= 1 + \mathsf{m}(n) \end{aligned}$$

Equivalently, $\mathsf{M}(n)$, $\mathsf{m}(n)$ are eventually quasilinear:

$$\begin{aligned} \mathsf{M}(n) &= \tfrac{1}{n_1} n + a_0(n) \\ \mathsf{m}(n) &= \tfrac{1}{n_k} n + b_0(n) \end{aligned}$$

for periodic functions $a_0(n)$, $b_0(n)$.

Maximum and minimum factorization length

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n \in S$,

$$\mathsf{M}(n) = \max \mathsf{L}(n) \qquad \mathsf{m}(n) = \min \mathsf{L}(n)$$

Theorem (Barron–O–Pelayo, 2014)

Let $S = \langle n_1, \ldots, n_k \rangle$. For $n > n_k(n_{k-1} - 1)$,

$$\begin{aligned} \mathsf{M}(n + n_1) &= 1 + \mathsf{M}(n) \\ \mathsf{m}(n + n_k) &= 1 + \mathsf{m}(n) \end{aligned}$$

Equivalently, $\mathsf{M}(n)$, $\mathsf{m}(n)$ *are eventually quasilinear:*

$$\begin{aligned} \mathsf{M}(n) &= \tfrac{1}{n_1} n + a_0(n) \\ \mathsf{m}(n) &= \tfrac{1}{n_k} n + b_0(n) \end{aligned}$$

for periodic functions $a_0(n)$, $b_0(n)$.

Interpretation:

Factorizations are chaotic for small monoid elements,

Maximum and minimum factorization length

Definition

Let $S = \langle n_1, \ldots, n_k \rangle$. For factorizations $\mathbf{a}, \mathbf{b} \in \mathsf{Z}(n)$ of $n \in S$,

$$\begin{aligned} \gcd(\mathbf{a}, \mathbf{b}) &= (\min(a_1, b_1), \ldots, \min(a_k, b_k)) \\ d(\mathbf{a}, \mathbf{b}) &= \max\{|\mathbf{a} - \gcd(\mathbf{a}, \mathbf{b})|, |\mathbf{b} - \gcd(\mathbf{a}, \mathbf{b})|\} \end{aligned}$$

Example

$S = \langle 4, 6, 7 \rangle \subset \mathbb{N}$, $\mathbf{a} = (3, 1, 1), \mathbf{b} = (1, 0, 3) \in \mathsf{Z}_S(25)$.

- $\mathbf{g} = \gcd(\mathbf{a}, \mathbf{b}) = (1, 0, 1)$.
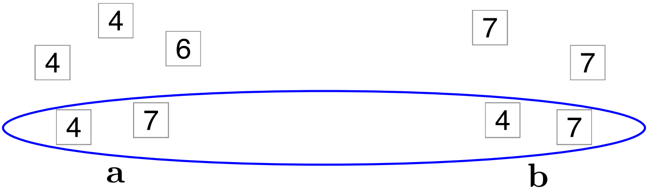
- $d(\mathbf{a}, \mathbf{b})$



The catenary degree

$S = \langle 5, 23, 26 \rangle$:

$\mathsf{c} : S \to \mathbb{N}$

Theorem (Chapman-Corrales-Miller-Miller-Patel, 2014)

Let $S = \langle n_1, \ldots, n_k \rangle$. *For* $n \gg 0$,

$$\mathsf{c}(n) = \mathsf{c}(n + n_1 \cdots n_k).$$

The ω-primality invariant

Fix an integral domain R and nonzero, nonunit $x \in R$.

The ω-primality invariant

Fix an integral domain R and nonzero, nonunit $x \in R$.

Definition

x is *prime* if $x \mid ab$ implies $x \mid a$ or $x \mid b$.

The ω-primality invariant

Fix an integral domain R and nonzero, nonunit $x \in R$.

Definition

x is *prime* if $x \mid ab$ implies $x \mid a$ or $x \mid b$.

Idea: $\omega(x) \in \mathbb{Z}_{>0}$ such that $\omega(x) = 1$ if and only if x is prime.

The ω-primality invariant

Fix an integral domain R and nonzero, nonunit $x \in R$.

Definition

x is *prime* if $x \mid ab$ implies $x \mid a$ or $x \mid b$.

Idea: $\omega(x) \in \mathbb{Z}_{>0}$ such that $\omega(x) = 1$ if and only if x is prime.

Definition (ω-primality)

Define $\omega(x) = m$ minimal such that

$$\begin{array}{rl} & x \mid \prod_{i=1}^{r} q_i, \quad r > m \\ \Rightarrow & x \mid \prod_{i \in T} q_i, \quad |T| \le m \end{array}$$

The ω-primality invariant

Fix an integral domain R and nonzero, nonunit $x \in R$.

Definition

x is *prime* if $x \mid ab$ implies $x \mid a$ or $x \mid b$.

Idea: $\omega(x) \in \mathbb{Z}_{>0}$ such that $\omega(x) = 1$ if and only if x is prime.

Definition (ω-primality)

Define $\omega(x) = m$ minimal such that

$$\begin{array}{rll} & x \mid \prod_{i=1}^{r} q_i, & r > m \\ \Rightarrow & x \mid \prod_{i \in T} q_i, & |T| \leq m \end{array}$$

Fact

R is factorial if and only if every irreducible element of R is prime. Moreover, $\omega(p_1 \cdots p_r) = r$ for any primes $p_1, \ldots, p_r \in R$.

The ω-primality invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$.

The ω-primality invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$.

Definition (ω-primality, additive version)

For $n \in S$, define $\omega(n) = m$ minimal such that

$$\begin{array}{rl} & \sum_{i=1}^{r} q_i - n \in S, \quad r > m \\ \Rightarrow & \sum_{i \in T} q_i - n \in S, \quad |T| \le m \end{array}$$

The ω-primality invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$.

Definition (ω-primality, additive version)

For $n \in S$, define $\omega(n) = m$ minimal such that

$$\begin{array}{rl} & \sum_{i=1}^{r} q_i - n \in S, \quad r > m \\ \Rightarrow & \sum_{i \in T} q_i - n \in S, \quad |T| \le m \end{array}$$

Warnings

- In S, n divides n' if $n + m = n'$ for some $m \in S$.

The ω-primality invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$.

Definition (ω-primality, additive version)

For $n \in S$, define $\omega(n) = m$ minimal such that

$$\begin{aligned} & \textstyle\sum_{i=1}^{r} q_i - n \in S, \quad r > m \\ \Rightarrow \quad & \textstyle\sum_{i \in T} q_i - n \in S, \quad |T| \leq m \end{aligned}$$

Warnings

- In S, n divides n' if $n + m = n'$ for some $m \in S$. Equivalently,

$$n \text{ divides } n' \quad \leftrightsquigarrow \quad n' - n \in S$$

The ω-primality invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$.

Definition (ω-primality, additive version)

For $n \in S$, define $\omega(n) = m$ minimal such that

$$\begin{array}{rl} & \sum_{i=1}^r q_i - n \in S, \quad r > m \\ \Rightarrow & \sum_{i \in T} q_i - n \in S, \quad |T| \le m \end{array}$$

Warnings

- In S, n divides n' if $n + m = n'$ for some $m \in S$. Equivalently,
  $$n \text{ divides } n' \quad \leftrightsquigarrow \quad n' - n \in S$$
- "Prime element of S" is different from "prime integer"

The ω-primality invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$.

The ω-primality invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$.

Facts

- The ω-function is unbounded.

The ω-primality invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$.

Facts

- The ω-function is unbounded.
- The ω-function is sub-additive, i.e.

$$\omega(a + b) \leq \omega(a) + \omega(b)$$

The ω-primality invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$.

Facts

- The ω-function is unbounded.
- The ω-function is sub-additive, i.e.

$$\omega(a + b) \leq \omega(a) + \omega(b)$$

Wild conjecture

Is the ω-function eventually quasilinear?

The ω-primality invariant

Fix a numerical monoid $S = \langle n_1, \ldots, n_k \rangle$.

Facts

- The ω-function is unbounded.
- The ω-function is sub-additive, i.e.

$$\omega(a + b) \leq \omega(a) + \omega(b)$$

Wild conjecture

Is the ω-function eventually quasilinear?

Theorem (O–Pelayo, 2013)

Let $S = \langle n_1, \ldots, n_k \rangle \subset \mathbb{N}$. For $n \gg 0$,

$$\omega(n) = \frac{1}{n_1} n + a_0(n)$$

for some n_1-periodic function $a_0(n)$. Equivalently,

$$\omega(n + n_1) = 1 + \omega(n)$$

The ω-primality invariant

Theorem (O–Pelayo, 2013)

Let $S = \langle n_1, \ldots, n_k \rangle \subset \mathbb{N}$. For $n \gg 0$,

$$\omega(n) = \frac{1}{n_1} n + a_0(n)$$

where $a_0(n)$ periodic with period n_1.

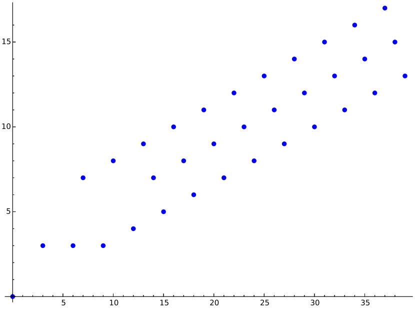
The ω-primality invariant

Theorem (O–Pelayo, 2013)

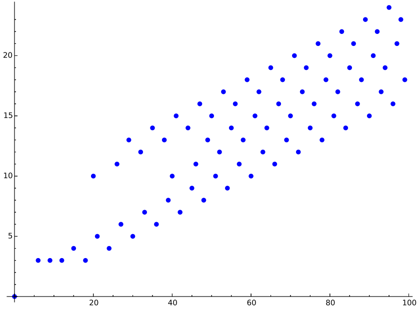
Let $S = \langle n_1, \ldots, n_k \rangle \subset \mathbb{N}$. *For* $n \gg 0$,

$$\omega(n) = \frac{1}{n_1} n + a_0(n)$$

where $a_0(n)$ *periodic with period* n_1.



$S = \langle 3, 7 \rangle$



$S = \langle 6, 9, 20 \rangle$

Bringing it all together

For any numerical monoid $S = \langle n_1, \ldots, n_k \rangle$:

Bringing it all together

For any numerical monoid $S = \langle n_1, \ldots, n_k \rangle$:

- $\mathsf{M}(n)$ and $\mathsf{m}(n)$ are eventually quasilinear

Bringing it all together

For any numerical monoid $S = \langle n_1, \ldots, n_k \rangle$:

- $\mathsf{M}(n)$ and $\mathsf{m}(n)$ are eventually quasilinear
- $\omega(n)$ is eventually quasilinear

Bringing it all together

For any numerical monoid $S = \langle n_1, \ldots, n_k \rangle$:

- $\mathsf{M}(n)$ and $\mathsf{m}(n)$ are eventually quasilinear
- $\omega(n)$ is eventually quasilinear
- $\mathsf{c}(n)$ is eventually periodic

Bringing it all together

For any numerical monoid $S = \langle n_1, \ldots, n_k \rangle$:

- $\mathsf{M}(n)$ and $\mathsf{m}(n)$ are eventually quasilinear
- $\omega(n)$ is eventually quasilinear
- $\mathsf{c}(n)$ is eventually periodic
- $\Delta(n)$ is eventually periodic

Bringing it all together

For any numerical monoid $S = \langle n_1, \ldots, n_k \rangle$:

- $\mathsf{M}(n)$ and $\mathsf{m}(n)$ are eventually quasilinear
- $\omega(n)$ is eventually quasilinear
- $\mathsf{c}(n)$ is eventually periodic
- $\Delta(n)$ is eventually periodic

Question

Why?

Bringing it all together

For any numerical monoid $S = \langle n_1, \ldots, n_k \rangle$:

- $\mathsf{M}(n)$ and $\mathsf{m}(n)$ are eventually quasilinear
- $\omega(n)$ is eventually quasilinear
- $\mathsf{c}(n)$ is eventually periodic
- $\Delta(n)$ is eventually periodic

Question

Why?

Interpretation:

Factorizations are chaotic for small monoid elements,
but stabalize for large monoid elements

Bringing it all together

For any numerical monoid $S = \langle n_1, \ldots, n_k \rangle$:

- $\mathsf{M}(n)$ and $\mathsf{m}(n)$ are eventually quasilinear
- $\omega(n)$ is eventually quasilinear
- $\mathsf{c}(n)$ is eventually periodic
- $\Delta(n)$ is eventually periodic

Question

Why?

Interpretation:

Factorizations are chaotic for small monoid elements,
but stabalize for large monoid elements

Question

Ok sure, but why???

Bringing it all together

For any numerical monoid $S = \langle n_1, \ldots, n_k \rangle$:

- $\mathsf{M}(n)$ and $\mathsf{m}(n)$ are eventually quasilinear
- $\omega(n)$ is eventually quasilinear
- $\mathsf{c}(n)$ is eventually periodic
- $\Delta(n)$ is eventually periodic

Question

Why?

Interpretation:

Factorizations are chaotic for small monoid elements,
but stabalize for large monoid elements

Question

Ok sure, but why??? What's the underlying reason??

Bringing it all together

Answer: Hilbert functions!

Bringing it all together

Answer: Hilbert functions!

Graded module N
over graded algebra R

Bringing it all together

Answer: Hilbert functions!

Graded module N over graded algebra R	$\rightsquigarrow$	Hilbert function $\mathcal{H}(N;n)$ defined for $n \geq 0$

Bringing it all together

Answer: Hilbert functions!

Graded module N over graded algebra R	$\rightsquigarrow$	Hilbert function $\mathcal{H}(N; n)$ defined for $n \geq 0$

Hilbert's Theorem

The Hilbert function of any finitely generated positively graded module N is eventually quasipolynomial.

Bringing it all together

Answer: Hilbert functions!

Graded module N over graded algebra R	$\rightsquigarrow$	Hilbert function $\mathcal{H}(N; n)$ defined for $n \geq 0$

Hilbert's Theorem

The Hilbert function of any finitely generated positively graded module N is eventually quasipolynomial.

Theorem (O, 2015)

The values of $\mathrm{M}(n)$, $\mathrm{m}(n)$, $\omega(n)$, $\Delta(n)$, *and* $\mathrm{c}(n)$ *over any numerical monoid are each determined by Hilbert functions.*

Bringing it all together

Answer: Hilbert functions!

Graded module N over graded algebra R	$\rightsquigarrow$	Hilbert function $\mathcal{H}(N; n)$ defined for $n \geq 0$

Hilbert's Theorem

The Hilbert function of any finitely generated positively graded module N is eventually quasipolynomial.

Theorem (O, 2015)

The values of $\mathsf{M}(n)$, $\mathsf{m}(n)$, $\omega(n)$, $\Delta(n)$, *and* $\mathsf{c}(n)$ *over any numerical monoid are each determined by Hilbert functions.*
